## 1. Introduction

This is a design document detailing and explain the development, Gameplay, Visual style and design of this flash game.

## 2. Target platform(s)

Web, Stand alone.

## 3. Development Software

### 3.1 Engine software

Stencyl Engine.

### 3.2 Programming software

Stencyl works.

### 3.3 Artwork software

Adobe Photoshop,

Adobe Fireworks.

### 3.4 Sound software

Audacity.

## 4. Specification

### 4.1 Concept

A top down objective based shooter, Set in mordern times inside a industrial complex area. You start off as a infiltrator of a goverment base, Who are thought to be developing a virus for unkown intentions,

Going through easy low level type levels until you get infected early on with this virus. Leading on you enter harder more populated security areas. Carrying on through will reveal what has been made and what is going on.

Gameplay is objective based as you will have to find ways to get into certain areas, such as simple keycard finding for doors to puzzles. Completing objectives or side objectives will reward in an XP of sorts which is used to unlock upgrades that are mutations of the virus you have been infected with. Controls would be very simple due to the top down styled with just mouse buttons/aiming and directional keys. Camera will be a close down limiting the view of the levels so you have to be cautious and strategic going through the levels.

The player will be limited to health pack based health with health pickups scattered across maps or on enemies they kill, If the player does get killed they will be reset to the start of the map or a checkpoint. There will be a wide range of weapons in the game from starting pistol to RPG's for heavier class enemies. Other pickups in the game will be a varied ammo ones or objective items such as keycards.

#### 4.2 Story

You infiltrated a facility that has been accused of genetic engineering for military purposes, You have been sent there to find out what's going on and try and shut it down or get information out. In doing so an outbreak occurred infecting you and causing havoc in the facility.

#### 4.3 Setting

The game is set in a military/secret facility due to actions before hand there is no power.

#### 4.4 Game structure

The level structure is an arena maze layout with limited visibility due to a light system.

#### 4.5 Players

Single player only.

#### 4.6 Actions

The player is able to move in all directions with mouse aim. There is also a in game store to be used with XP earned.

#### 4.7 Objectives

The player is trying survive as long as they can gaining XP, Time and score to be added up at the end and submitted to an online score board.

### 5. Graphics

## 5.1 Styles

Dark, Simple

## 5.2 Fonts

Roboto In game, Trebuchet MS for menu buttons.

## 5.3 Colours

## 6. Data storage

### 6.1 Online data

Sets of High scores

### 6.2 Statistical data

high scores

### 6.3 Legal and Ethical Considerations

Target audience was casual/competitive players, Storing no player info unless played via kongregate logged in where it takes only your name for high scores.

I made all the art myself and only found sound sources that are Licensed for free to use, edit and distribute without needing to display credits.

## 7. Gameplay

### 7.1 World

The world is set in a facility with no power .

### 7.2 Object types

Health and Ammo pickups, Doors.

### 7.3 Controls

Mouse to aim and Shoot

WASD to Move

Q To buy a life

E To but bigger light  
R to change weapon

#### 7.4 Direct control

#### 8. Supported hardware

Mouse and Keyboard

#### 9. Screens & Menus

##### 9.1 Game Interface

## 9.2 Game Over

## 10 Cutbacks

Due to time the story and content has been cut down to be released.

The gameplay has been cut down to an arena survival type keeping pickups, with the objective of getting the highest score for kongregate leader boards for each difficulty set. The story has moved in to an outbreak on the mission you were on that has caused power to be cut out leaving you with only flashlight for vision.
